DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I and Species 7, which read on claims 1, 2 and 4, Fig. 7, in the reply filed on 3/01/2006 is acknowledged.

Claims 3 and 5-38 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/01/2006.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Takahashi et al. (US6266119B1).

In regard to claim 1, Takahashi et al. teach (Figs. 4-5) a display device forming

Art Unit: 2871

- a board (driver board 36) for mounting a connector which allows inputting of video data thereon and
- a board (control circuit via FFC 39) for mounting a display control circuit to be connected to the connector thereon on a surface of a display module opposite to an observation side as shown in Figs. 5B or 5C,

wherein the board for mounting the connector thereon and the board for mounting the display control circuit thereon are physically separated from each other and, further, an area of the board for mounting the display control circuit thereon is set smaller than an area of the board for mounting the connector thereon as Fig. 4 shown.

In regard to claim 2, Takahashi et al. teach (Figs. 4-5) a display device comprising

- a display panel PNL 38/31/32/38, another member (black light unit 40) different from the display panel PNL which is mounted on a back surface of the display panel, and
- a board (driver board 36) for mounting the connector which allows inputting of video data and a display control circuit which is connected to the connector 37, wherein the board for mounting the connector thereon and
- the board (control circuit via FFC 39) for mounting the display control circuit thereon are physically separated from each other, the board for mounting the display control circuit thereon is arranged to be brought into contact with a back surface of a region of the display panel PNL except for a display portion (as

Art Unit: 2871

Figs. 5B-C shown), and the board for mounting the connector is arranged to be brought into contact with a back surface of the another member.

wherein

Claim 4:

- an area of the board for mounting the display control circuit thereon is set smaller than an area of the board for mounting the connector thereon as Fig. 4 shown.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Fukata et al. (US 6903794 B2) disclose a semiconductor device of the present invention includes a film-like flexible substrate having formed thereon a wiring pattern, external connection terminals formed at both end portions of the flexible substrate; and a semiconductor element mounted on a surface side of the flexible substrate.

Tajima et al. (US20010040664) disclose a tape carrier package is provided, which includes: a line provided on one surface of a tape substrate; and a semiconductor chip mounted on an other surface of the tape substrate, the semiconductor chip having an electrode which is electrically connected to the line.

Kawaguchi et al. (US 5592199 A) disclose a panel having a plurality of electrode terminals disposed along a peripheral portion of one surface thereof is assembled at small size, less weight, and low cost.
